Company: Black & Veatch Family of Companies

Together, we own our company, our future, and our shared success.

As an employee-owned company, our people are Black & Veatch. We put them at the center of everything we do and empower them to grow, explore new possibilities and use their diverse talents and perspectives to solve humanity's biggest challenges in an ever-evolving world. With over 100 years of innovation in sustainable infrastructure and our expertise in engineering, procurement, consulting and construction, together we are building a world of difference.

Company : Black & Veatch Corporation

Req Id : 117122

Opportunity Type : Staff

Relocation eligible : Yes

Full time/Part time : Full-Time

Project Only Hire : No

Visa Sponsorship Available: No

Why Black & Veatch?

At Black & Veatch, you'll be part of work that matters—designing, creating, and building the infrastructure communities rely on every day, from concept through execution.

We care about how the work gets done as much as what we build. Safety is built into every decision, and people look out for each other—speaking up, collaborating, and doing the right thing because it affects real lives.

You'll work alongside teams solving complex challenges and turning ideas into solutions that perform in the real world—gaining hands-on experience across projects, technologies, and disciplines.

Ownership shows up in how we work. We take responsibility for outcomes, follow through on commitments, and take pride in what we deliver. As a 100% employee-owned company, employees share in the long-term success we build together.

With flexible ways of working and meaningful development opportunities, you'll build a career you can be proud to stand behind.

The Opportunity

Black & Veatch is seeking a Power System Studies Engineer with 1-4 years' experience to join our Power System Studies team. The ideal candidate has significant working experience and knowledge of Distribution System design concepts & analyses such as Short Circuit (Fault) Analysis, Load Flow, DER Impact Analysis, Protection Coordination Studies, Distribution Interconnection Studies, System Impact Studies and system modeling software for the same.

Key Responsibilities

- Continues to learn and remains current on departmental design guides, standards, systems, applicable engineering codes and B&V policies and procedures. Applies to assigned tasks as appropriate.
- Continues developing and can independently apply knowledge. Complies with B&V quality program relative to assigned tasks. Supports continuous improvement and change management efforts.
- Prepares a variety of increasingly complex engineering deliverables. Performs research and develops recommendations for equipment and/or materials selection. Collects, assimilates, and manages data for engineering work. Prepares increasingly complex engineering calculations following standard methods and principles. Understands and adheres to budget, schedule, and quality requirements. May recognize, define and resolve problems within assigned area. May provide direction and guidance to others.
- Assigns tasks to develop entry level professionals and interns. Coordinates with project leadership and other internal/external team members on less complex projects. Interacts as needed with other disciplines on details of design work.
- Works to understand external client's interest and drivers through regular interaction and communication. Also focuses on needs of internal clients and project leadership. May provide support to business development or pursuit activities.
- Shares current knowledge of latest technology and processes.
- As skills develop, may assist with performance management process, recognition, and any corrective actions required. Actively mentors entry level professionals and interns.

Preferred Qualifications

- 1-4 years of experience in performing Distribution System planning studies
- Understanding of basic Distribution System design concepts, analyses, calculations, et cetera.
- 1 year of experience in performing studies such as Short Circuit (Fault) Analysis, Load Flow, DER Impact Analysis, Protection Coordination Studies, Distribution Interconnection Studies, System Impact Studies, et cetera.
- 1 year of experience utilizing one of the below system modeling software programs and familiarity with others that are listed: CYME, Synergi Electric, et cetera.
- Knowledge of or experience performing various power system studies which are performed in support of Distribution System design (Short Circuit, Power Flow, Voltage Analysis, et cetera).
- Familiarity with analytics and scripting (Python, et cetera).
- Ability to independently develop written communication and to facilitate coordination with team members and clients.
- Ability to work cooperatively in a team environment

Minimum Qualifications

- Requires a bachelor's degree in engineering from either a recognized accredited program in their home country or the country in which the professional is practicing.
- Minimum of 1 year related work experience.
- All applicants must be able to complete pre-employment onboarding requirements (if selected) which may include any/all of the following: criminal/civil background check, drug screen, and motor vehicle records search, in compliance with any applicable laws and regulations.

Work Environment/Physical Demands

Hybrid or flexible work options may be offered after the first 90 days of employment based upon manager discretion, job performance and work assignments.

Compensation Transparency

In accordance with local requirements, the annual compensation ranges for this role are listed below by state or jurisdiction and reflect the applicable office location(s) within each. Final compensation is determined based on factors such as skills, experience, qualifications, internal alignment, geographic location, and other factors permitted by law.

- State of Colorado: $91,047 - 152,053
- State of Minnesota: $86,909 - 145,142

Salary Plan

ENG: Engineering
