Job description

Requisition ID: 1738971

Location: Raleigh, NC, and Dallas - 1201 Elm St

At EY, we're all in to shape your future with confidence.

We'll help you succeed in a globally connected powerhouse of diverse teams and take your career wherever you want it to go. Join EY and help to build a better working world.

EY is the only professional services firm with a separate business unit ("FSO") that is dedicated to the financial services marketplace. Our FSO teams have been at the forefront of every event that has reshaped and redefined the financial services industry. If you have a passion for rallying together to solve the most complex challenges in the financial services industry, come join our dynamic FSO team!

We help our clients transform. Together we are changing the way they interact with their Customers, Employees and Partners alike. We are modernizing their applications, creating new ones and driving business efficiency across their ever-changing platform and channel infrastructures. Everything we do centers around this simple story.

The opportunity

As an FSO Technology Service Delivery Manager, you'll be based in our Service Delivery Center, which is made up of high-performing US-based colleagues who work closely with our experienced advisory professionals. We deliver Technology project-based work and managed services to our clients. Here, you'll work as part of a project team and will be responsible for the design, build/configuration, testing, analysis, delivery and support of Technology solutions. This position is fast-paced and ever-changing, which means you'll need to be a flexible self-starter and be able to manage changing priorities and learning new and rapidly changing technology solutions.

We are looking for Frontend Engineers who will collaborate with clients to transform their business through disruptive innovation and transformational design solutions. The team supports clients in modernizing customer-facing systems, processes, and products to deliver intuitive, responsive, accessible, and high-performing digital experiences. The team leverages Angular, React, TypeScript, API integration, cloud technologies, and modern UI engineering practices to enable scalable end-to-end solutions.

Your Key Responsibilities

The goal is to help our clients solve business problems through frontend engineering solutions. You will assist engagement teams with analyzing business and user experience requirements; designing, developing, integrating, testing, deploying, and supporting responsive web applications; and delivering high-quality systems with a focus on usability, accessibility, reliability, performance, and excellent customer experience. You will demonstrate in-depth technical capabilities and professional knowledge.

Skills and attributes for success

- Prior frontend software product development experience, with strong knowledge of modern UI engineering practices and a preferred understanding of DevOps tools and services.
- Deliver engineering solutions through all phases of the project lifecycle, including requirements definition, engineering design, development, integration, and testing; based on a proven agile methodology.
- Demonstrate hands-on technical capabilities in Angular, React, TypeScript, JavaScript, HTML5, CSS3, and responsive web development.
- Effectively work with client engagement teams with diverse skills and backgrounds fostering an innovative and inclusive work environment.
- Demonstrate understanding of current technology environment and industry trends and provide recommendations for engagement and client service issues.
- Willingness and ability to travel up to 30% of the time.

To qualify for the role you must have

- Bachelor’s degree in Computer Science or other related field.
- A minimum of 1 year of experience in technology software development.
- Experience developing web applications using Angular, React, TypeScript, JavaScript, HTML5, CSS3, and responsive design practices.
- Experience building user interfaces and reusable frontend components.
- Experience integrating frontend applications with RESTful APIs.
- Understanding of frontend concepts including state management, browser compatibility, accessibility, and performance optimization.
- Familiarity with Git, npm or Yarn, and CI/CD practices.
- Experience with frontend testing tools for unit and component testing.
- Comfortable working in Agile delivery teams and collaborating with UX designers, backend engineers, product owners, and QA professionals.

Ideally, you’ll also have

- Experience with the following technologies and practices
- Angular, React, TypeScript, JavaScript, HTML5, and CSS3
- State management using NgRx, Redux, Context API, or similar patterns
- Unit and component testing using Jest, Jasmine, Karma, or React Testing Library
- End-to-end test automation using Cypress or Playwright
- Responsive design, web accessibility, cross-browser compatibility, and performance optimization
- Node.js tooling, npm or Yarn, Webpack or Vite, cloud platforms, and micro frontend architecture

Cloud technologies like AWS, or Azure

What we look for

We’re interested in intellectually curious people with a passion for finding new and innovative ways to make things better. You’ll also need to be a self-starter and quick learner with a strong background in computer science from both theoretical and practical points of view. If you’re ready to be the future of the group and make your mark in a growing business, this role is for you.

What we offer you

At EY, we harness our collective strength to empower you to shape your future with confidence through professional growth, personal fulfillment and an inclusive culture. Learn more at ey.com/us/careers.
