Industry Cities & Places

At Jacobs, we're challenging today to reinvent tomorrow by solving the world's most critical problems for thriving cities, resilient environments, mission-critical outcomes, operational advancement, scientific discovery and cutting-edge manufacturing, turning abstract ideas into realities that transform the world for good.

Your impact

Jacobs is challenging today to reinvent tomorrow by solving the world's most critical problems. We're seeking a Junior Data Scientist to join the Asset Management Digital Strategies Practice within our Advisory Solutions Group. You'll support Federal clients by helping develop data-driven analytical solutions that improve operational efficiency and management effectiveness.

In this early-career role, you'll contribute across the data and application development lifecycle—from collecting, organizing, and analyzing data to building visualizations, reports, and interactive decision-support tools. You'll work with data scientists, software developers, and client teams to turn business needs into practical analytical solutions, including applications built with Palantir Foundry and React.

Key Responsibilities

- Collect, clean, transform, and analyze data from multiple sources.
- Support the development and maintenance of databases, data models, and repeatable data workflows.
- Apply statistical and analytical techniques to explore data and help answer client questions.
- Develop visualizations, reports, and dashboards that communicate findings and support decision-making.
- Contribute to software development using the Palantir SDK and React, including building and improving Workshop applications.
- Collaborate with team members to implement front-end and back-end solutions that meet project needs.

- Translate business and operational requirements into clear analytical or technical tasks.
- Present findings and explain analytical results to technical and nontechnical audiences.
- Develop your skills in data science, software development, business process engineering, and system integration.

Here's what you'll need

- Bachelor’s degree in Data Science, Computer Science, Software Engineering, Data Engineering, Artificial Intelligence, Applied Mathematics, Statistics, or a related quantitative field.
- Up to two years of experience in data science, analytics, or software development. Relevant academic projects and internships count; recent graduates are encouraged to apply.
- Foundational programming skills in Python, JavaScript, TypeScript, or a similar language.
- Basic understanding of SQL and relational databases.
- Strong problem-solving skills, attention to detail, and a collaborative approach to work.
- Interest in learning new technical skills and applying them in a fast-paced environment.
- Ability to travel up to 20% within the United States and internationally.
- Ability to obtain a U.S. Government Common Access Card and obtain and maintain a U.S. Government security clearance.
- U.S. citizenship is required for this government-facing role. Visa sponsorship is not available.

Ideally, you'll also have:

- Hands-on experience with Palantir Foundry, including its SDK or Workshop.
- Experience with React, Angular, or another front-end framework.
- Exposure to business intelligence tools such as Tableau or Power BI.
- Experience with data visualization, statistical analysis, or predictive modeling.
- Interest in business process engineering, system integration, or decision-support applications.

Posted Salary Range: Minimum

69,500.00

Posted Salary Range: Upper

121,500.00

Our health and welfare benefits are designed to invest in you, and in the things you care about. Your health. Your well-being. Your security. Your future. Employees have access to medical, dental, vision, and basic life insurance, a 401(k) plan, and the ability to purchase company stock at a discount. Eligible employees may also enroll in a deferred compensation plan or the Executive Deferral Plan. Jacobs has an unlimited U.S. Personalized Paid Time Off (PPTO) policy for full-time salaried/exempt employees, seven paid holidays, and caregiver leave. And certain roles may be eligible for additional rewards, including merit increases, performance discretionary bonus, and stock.

The base salary range for this position is $69,500.00 to $121,500.00. Within the range, individual pay is determined by work location and additional factors, including job-related skills, experience, and relevant education or training.

All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, disability or protected veteran status. Job posted on September 27, 2026. This position will be open for at least 3 days.

We value collaboration and believe that in-person interactions are crucial for both our culture and client delivery. We empower employees with our hybrid working policy, allowing them to split their work week between Jacobs offices/projects and remote locations enabling them to deliver their best work.

Your application experience is important to us, and we’re keen to adapt to make every interaction even better. If you require further support or reasonable adjustments with regards to the recruitment process (for example, you require the application form in a different format), please contact the team via Careers Support .
