Accelerate possibilities. The WSP Data Center CoE (Center of Excellence) is growing, and we're looking for smart, responsive, collaborative people to join us. Our CoE is 100% focused on data centers—supporting the world's leading AI and cloud infrastructure companies. You'll work to help tackle our clients' biggest challenges: Where to build? How to secure power and water? How to develop responsibly and become a valued part of the community? AI is transforming life from scientific discoveries to smarter transportation and more sustainable communities. Data centers make it possible.

With us, you can build impact, deliver remarkable projects, and grow your career while shaping the future of the data center industry.

WSP is currently initiating a search for an Early Career Electrical Engineer for our Houston, TX or Dallas, TX office

Takes part in providing local technical assistance for the due diligence, investigation, remediation, impact assessment, permitting, design, development, and construction of utility, industrial, and commercial scale projects in the public and private sector. Tasks may include basic assistance with the research, design, concept development, and construction of transmission and distribution substations, power distribution, power regulation, renewable energy, as well as protection and control systems in a wide variety of contexts (utilities, transportation, building, and Federal, State, and local government projects). Generates accurate and concise documentation regarding assigned aspects of the project. Ensures that responsibilities are delivered and

adhered to with a level of quality that meets or exceeds acceptable industry standards for design, safety, and functionality.

Your Impact

- Under general supervision, assist with collecting, compiling, and analyzing data relating to substation components, equipment specifications for procurement package development and pricing, IFR/IRC design and review processes, and IEEE/NESC Standards/NERC regulations for design work.
- Assist with performing basic professional electrical engineering work relating to the design of single line, three line, wiring diagrams, general arrangement, substation layout and bus arrangement, grounding grid design and lightning protection in conformance with applicable rules, standards, and construction or operating permits.
- Perform routine engineering functions and provide entry-level technical assistance on various design requirements, equipment sizing and cabling, AC/DC panel design, and conduit and trenching design strategies to account for the safety and functionality of end-users, systems, and infrastructure.
- Assist with verifying the characteristics of a site and providing basic technical assistance on engineering, design, testing, maintenance, and construction procedures and issues.
- Under close supervision, develop electrical calculations for loads, equipment sizing, feeder sizing, voltage drop, grounding, lighting circuits and controls, facility and electrical service, and power distribution.
- Generate complete, accurate, and concise documentation using electronic systems, drawings, and field/work site notebook/logs.
- Comply with safety guidelines and site-specific procedures which include but are not limited to, location data, statistical documentation, engineering studies and surveys, and construction.
- Complete training on assigned tasks.
- Exercise responsible and ethical decision-making regarding company funds, resources and conduct, and adhere to WSP’s Code of Conduct and related policies and procedures.
- Perform additional responsibilities as required by business needs.

Who You Are

Required Qualifications

- Bachelor’s Degree in Electrical Engineering.
- 0 to 1 years of relevant post education experience.
- Excellent research skills with analytical mindset.
- General understanding of electrical engineering as applied in design engineering of large capital projects.
- Familiarity with relevant engineering and electrical construction laws, codes, regulations, compliance practices, and record-keeping requirements.
- Competent interpersonal and communication skills when interacting with others, expressing ideas effectively and professionally to an engineering and non-engineering audience.
- Proficient self-leadership with attention to detail, multi-tasking, and prioritization of responsibilities in a dynamic work environment.
- Ability to work independently under general supervision, as well as part of a team to meet business objectives.
- Basic proficiency with technical writing, office automation, software, spreadsheets, technology, and tools.
- Familiarity with discipline-specific design software (i.e., CADD, Aspen, and CAPE), AutoCADD electrical.
- Proven track record of upholding workplace safety and ability to abide by WSP’s health, safety and drug/alcohol and harassment policies.
- Ability to work schedules conducive to project-specific requirements that may extend beyond the typical workweek.
- Occasional travel may be required depending on project-specific requirements.

Preferred Qualifications

- Engineer in Training Certification.
- Prior internship related to the degree of study and the specific engineering discipline.
- A member of and/or actively participate in local professional practice organizations.
