## Job description

Paragon Energy Solutions

Paragon is seeking an Electrical Engineer I to join our team in our Fort Worth, Texas office! The Electrical Engineer I provides sound engineering principles in design, development, implementation, testing and evaluation (by analytical or other means) for equipment applied in nuclear safety-related projects. Includes development of design drawings, item test plans, various calculations, and subsequent test reports. The engineer will work with various power and control related equipment such as motor control centers, switchgear, control panels, starters, relays, transformers, circuit breakers, disconnects, as well as many other types of control and power equipment. This role will work on engineering related activities on projects from start to finish and will provide assistance to senior level engineers managing complex projects.

**Responsibilities:**

- Primary responsibility is to ensure that equipment technical specifications are met, that project scope is performed with adequate engineering rigor while mitigating project risk in order to maintain project schedule and provide the highest quality possible result.
- Maintain ongoing project requirements and specifications for multiple projects for multiple clients.
- Analysis of component functional and design requirements for development of test plans.
- Perform design reviews with the engineering team to ensure that the design meets the client requirements and industry design standards.
- Creation and refinement of design and test documentation to capture design intent and document the key aspects necessary to accomplish the quality and documentation goals of a project including:
- Commercial Grade Dedication plans, equipment test plans
- Seismic, environmental, and/or EMI/RFI qualification test plans and reports

- Discrepancy report resolution
- Engineering calculations and evaluations
- Design drawing package creation (including Solidworks CAD)
- Create project documentation to convey the key aspects of a design to a client or manufacturing partner.
- Perform root cause, apparent cause and/or common cause analysis and testing activities, when required.
- Work as peer review of documentation prior to client delivery.
- Interaction with the production floor to resolve design and/or testing issues.
- Collaborate with other engineers to increase knowledge/skills.
- Develop analytical processes.
- Share experiences.
- Review others designs.

**Qualifications:**

- Bachelor's degree in Electrical Engineering or equivalent with industry experience (electrical, industrial, electronics, manufacturing) is required.
- Communicate effectively, both verbally and written. A strong candidate must be able to communicate with any and all levels within the organization and shall be able to do so while maintaining professionalism.
- Must have strong problem-solving skills, capable of producing creative approaches for generating new ideas and improving existing processes or products within the bounds of quality and industry regulations.

**Why Paragon?**

At Paragon, our mission is to lower the carbon footprint through innovative nuclear programs that are safe, sustainable, and economical. We support critical energy and national security applications through excellence in engineering, responsiveness, and integrity. Our team operates with a shared set of values, we stay persistent in solving challenges, collaborate with purpose, and approach every project with technical passion and professionalism.

**Ready to become a Paragonian?**

If you are looking for a technically challenging role with purpose, professional growth, and the opportunity to support national security and energy reliability, we would love to hear from you.

**Paragon is an equal opportunity employer.**

All qualified applicants will receive consideration for employment without regard to race, color, sex, sexual orientation, gender identity, religion, national origin, disability, veteran status, age, marital status, pregnancy, genetic information, or other legally protected status.
