Job description

What to Expect

Tesla is seeking a Battery Launch Engineer to own holistic product improvement for Megapack and other energy storage products, from factoryrampthrough production sustaining and field quality. This role is embedded on the factory floor and serves as the design team's primary liaison to manufacturing, process, and quality teams.You'lldebug issues on the production line, investigate field failures, and find the right solution, whetherthat'sa design change, a process update, or a manufacturing improvement. This requires strong mechanical design fundamentals, manufacturing awareness, and the judgment to know which lever to pull.

What You'll Do

- Serve as the designteam's on the ground representative in the factory, working daily alongside manufacturing, process, and quality teams to translate design intent into production reality
- Support the product ramp from initial builds to mature builds, ensuring designs are optimized for manufacturability (DFM) and assembly (DFA)
- Work with suppliers to ensure components meet design intent and quality standards, driving corrective action when they don't
- Debug production issues in real time, identifying whether root cause is design, process, or manufacturing driven. Determine the right solution and own the implementation through the appropriate channel
- Own sustaining mechanical design changes driven by production feedback, resolving build issues, improving yields, and driving cost and performance improvements back into the design
- Review parts, assemblies, and production output with a critical eye, identifying fit, finish, tolerance, and workmanship issues before they become systemic problems
- Conduct root cause analysis on field quality issues, then drive corrective actions through design mitigations, process updates, or specification clarifications

- Develop and execute design validation plans and test methods to confirm components and subsystems meet requirements, including validation of corrective actions and design mitigations driven by RCA, in collaboration with design and cross-functional teams
- Create and maintain engineering documentation including design change records, process workflows, SOPs, and launch readiness checklists
- Travel as needed to support supplier quality, sister factories, or launch / sustaining activities at other Tesla facilities

What You'll Bring

- Bachelor'sDegree in Mechanical Engineering or equivalent experience, with 3+ years of mechanical design experience. You have personally designed, detailed, and released parts or assemblies into high-volume production
- Strong engineering fundamentals in material science, heat transfer, mechanics, and fluids, with working knowledge of materials used in mechanical design (metals, plastics, insulators, connectors, gaskets, etc.) and their fabrication processes (injection molding, machining, welding, brazing, sheet metal, extrusions, casting, forging, bonding, etc.)
- Proficiency in CAD (SolidWorks, CATIA, NX, or similar) with strong working knowledge of tolerances and a demonstrated ability to read and interpret engineering drawings, GD&T, and specifications with a sharp eye for what doesn't look right
- Familiarity with design for reliability/FMEA concepts, PLM/engineering change systems, and PCBA/electrical systems
- Comfortable using data to drive decisions. Proficiency in Excel and familiarity with tools such as MATLAB, Python, Minitab, JMP, or similar for data analysis, trend identification, and statistical methods (SPC, 8D, etc.)
- Comfortable working on a production floor daily - this role is factory-embedded, not desk-embedded
- Excellent problem solving instincts and the practical judgment to distinguish between a cosmetic concern and a functional risk
- Strong communication skills. You'll be the translator between design engineers and factory teams, so clarity matters
- Experience with launch, NPI, or manufacturing/quality/process engineering in a high-volume production environment is a plus
- Experience with energy storage systems, high-voltage battery products, or battery cell manufacturing and fundamentals (swelling, DCR, PPR, etc.) is a plus

Benefits

Along with competitive pay, as a full-time Tesla employee, you are eligible for the following benefits at day 1 of hire:

- Medical plans > plan options with $0 payroll deduction
- Family-building, fertility, adoption and surrogacy benefits
- Dental (including orthodontic coverage) and vision plans, both have options with a $0 paycheck contribution
- Company Paid (Health Savings Accounts) HSA Contribution when enrolled in the High-Deductible medical plan with HSA
- Healthcare and Dependent Care Flexible Spending Accounts (FSA)
- 401(k) with employer match, Employee Stock Purchase Plans, and other financial benefits
- Company paid Basic Life, AD&D
- Short-term and long-term disability insurance (90 day waiting period)
- Employee Assistance Program
- Sick and Vacation time (Flex time for salary positions, Accrued hours for Hourly positions), and Paid Holidays
- Back-up childcare and parenting support resources
- Voluntary benefits to include: critical illness, hospital indemnity, accident insurance, theft & legal services, and pet insurance
- Weight Loss and Tobacco Cessation Programs
- Tesla Babies program
- Commuter benefits
- Employee discounts and perks program
- Earned Wage Access: Real-time pay access paid daily, subject to eligibility and schedule (applicable for below Sr. Managers levels)

Archive notes for ECS 1100

Retrieval note: Full employer text retained by DiversityJobs; requisition 277119 and Brookshire match the official indexed posting. Tesla page is blocked. Description calls the role Battery Launch Engineer internally; page title matches the master.

Key skills listed in the archive: mechanical design; battery packs; manufacturing; product launch; field quality
