Job description

What to Expect

Tesla's Materials Engineering group is looking for a highly motivated Process Engineer to work on a critical challenge facing the world's energy transition - Battery Recycling, metals and materials engineering.

As a process engineer in our metals and materials group, you will lead the development and deployment of new-to-the world chemical production processes and equipment. A successful team member will lead projects starting from the concept through design, install, integration, ramp, and handover to operations teams.

What You'll Do

- Operate pilot plants
- Oversee and deploy demonstration scale facilities through the whole project lifecycle including: concept, basic engineering, detailed engineering, procurement, construction, commissioning and operation
- Support commercial scale design
- Develop operating procedures, safety protocols, and maintenance plans for large-scale chemical process equipment
- Support operations teams with achieving productivity and material quality targets on pilot and commercial scale systems
- Interface with equipment suppliers through concept development, system design, detailed design, procurement, installation, and acceptance testing
- Work closely with battery materials R&D team for the introduction of novel materials and new process methods at commercial scale
- Receive and evaluate a problem statement, brainstorm and downselect solutions ensuring priority metrics (time, quality and cost) are maintained, get stakeholder buy-in, design & purchase equipment, create install instructions and lead commissioning
- Lead Design for a section of large capital scope (>$5MM). Develop design with cross functional team (P&ID, M&EB, Line/Equipment Sizing, modelling), drive consensus followed by FRQ submissions & following project through FAT of

equipment, install and commissioning. Developing and maintaining process flow diagrams, process design criteria, stream tables, and piping & instrumentation diagrams

What You'll Bring

- Evidence of exceptional ability, including understanding of engineering fundamentals and demonstrated ability to leverage this understanding to solve challenging problems
- Degree in Chemical Engineering, Materials Engineering, Ceramics Engineering or related field, or equivalent experience
- Experience with either powder handling, hydrometallurgy, or chemical processing
- Liquid/Gas Fluid Calculations,Heat Transfer,Thermal equipment (Dryers or Kilns),Powder Mixing & Conveying,Powder loading and dosing,Solid-liquid separation equipment,Reactors,Evaporators, crystallizers
- 1-5 years in a process design experience using the skills listed above
- Participation in engineering projects from concept development to commissioning
- Experience in brownfield projects in existing plants

Tesla is an Equal Opportunity / Affirmative Action employer committed to diversity in the workplace. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, age, national origin, disability, protected veteran status, gender identity or any other factor protected by applicable federal, state or local laws.
