Control Software Engineer

Commonwealth Fusion Systems · Devens, MA

Job ID (this archive)	ENERGY-095
Employer	Commonwealth Fusion Systems
Location(s)	Devens, MA
Career stage (archive tag)	Experienced (Mid-career)
Location group	Other U.S.
Majors (archive tags)	Electrical Engineering, Computer Engineering, Systems Engineering, Computer Science, Software Engineering
Energy area	Fusion / control software
Pay listed	$107,000 – $160,000 per year
Recruiting status when checked	Open when checked: the employer page had a live application. Checked Oct 26, 2026.

Job description

About Commonwealth Fusion Systems:

Commonwealth Fusion Systems is on a mission to deliver the urgent transition to fusion energy.

Combining decades of research, top talent, and new technologies, we're designing and building commercially viable fusion power plants. And we're working with policymakers, suppliers, and many others to build the energy industry of the future.

We're in the best position to make it happen. Since 2018, we've raised $4 billion of capital, making us the largest and leading fusion company in the world.

Now we're looking for more thinkers, doers, builders, and makers to join us. People who'll bring new perspectives, solve tough problems, and thrive as part of a team.

If that's you and this role fits, we want to hear from you.

Join the power movement as a Control Software Engineer

As a Control Software Engineer, you will be responsible for the design, implementation, and verification of software and controls for advanced R&D equipment and complex machinery.

As a member of the Software Engineering team you will be a hands-on technical contributor, a champion of writing excellent quality, production-ready code for mission-critical real-time systems. You will collect functional requirements from customers and produce software solutions to meet these requirements.

You will work with a variety of engineers to integrate your software into software testbeds, hardware testbeds, and the production tools. You will also contribute to the broader software ecosystem to improve tooling and processes used across the company.

What you'll do:

- Develop control software across multiple platforms, including PLCs and real-time Linux
- Develop operator interfaces and workflows
- Improve software tooling to increase developer velocity and enable new capabilities

What we're looking for:

- Bachelor's degree in a relevant engineering field (computer science, computer engineering, electrical engineering, industrial engineering, etc.)
- 5+ years of experience with industrial control systems and/or embedded control systems
- 5+ years of experience in producing production quality control software
- Experience with modern software development lifecycle practices (CI/CD, git version control, unit testing, integration testing, etc)
- Proficiency with Python
- Proficiency with at least one real-time control language (C++, SCL/ST, Rust, etc)

Bonus points for:

- Experience with industrial protocols (e.g. EtherCat, Profinet, Modbus, etc)
- Experience developing Human-Machine Interfaces (HMIs) for industrial or scientific equipment
- Familiarity with industrial control platforms (e.g. Beckhoff or TwinCat)
- Familiarity with Linux
- Familiarity with general networking (IP/UDP)

Must-have Requirements:

- Perform activities such as typing, standing, sitting, etc. for extended periods of time
- Dedication to safety to mitigate industrial hazards that may include heat, cold, noise, fumes, strong magnets, lead (Pb), high voltage, high current, pressure systems, and cryogenics
- Willingness to occasionally travel or work required nights/weekends/on-call

#LI-Hybrid

At CFS, we excel in fast-paced environments, driven by our values of integrity, execution, impact, and self-critique. As we grow, we’re eager to bring on mission-driven folks who offer diverse perspectives and fresh ways to tackle challenges.

We value diversity deeply and are proud to be an equal opportunity employer by choice. We consider all qualified applicants equally, regardless of race, color, national origin, ancestry, citizenship status, protected veteran status, religion, physical or mental disability, marital status, sex, sexual orientation, gender identity or expression, age, or any other basis protected by law.

This role requires compliance with U.S. laws concerning the export of controlled or protected technologies or information (collectively, “Export Control Laws"). Any offer of employment will be contingent on the need for compliance with such Export Control Laws.

Compensation

Salary range for this full-time position + equity + benefits. The actual salary will depend on level, location, qualifications, and experience. The range displayed on each job posting reflects new hire salaries for the position across all US locations. Benefits include:

- Competitive compensation with equity
- 13 Company-wide Holidays
- Flexible vacation days
- 10 sick days
- Generous parental leave policy
- Health, dental, and vision insurance
- 401(k) with employer matching
- Professional growth opportunities
- Team-building activities

Employer-disclosed pay range: USD 107,000 - 160,000 per year

Archive notes for ECS 1100

Retrieval note: New posting found in expansion round. Official Lever application page includes applicant input fields. Major fit is an archive classification; eligibility follows the employer qualifications.

Degree / experience excerpt: Bachelor's degree in a relevant engineering field (computer science, computer engineering, electrical engineering, industrial engineering, etc.) | 5+ years of experience with industrial control systems and/or embedded control systems | 5+ years of experience in producing production quality control software

Key skills listed in the archive: Python; C++; Rust; Linux; Git; R

Archive metadata — Accessed October 26, 2026 (America/Chicago).

Recruiting status: Active · PDF: Complete · Source: Official employer Lever Employer / ATS identifier: ca1ae177-9781-4ea1-8fd3-f22c43e9e094

Career stage: Mid-career

Major fit: Direct skills pathway: software development, computing and engineering; consult the exact degree and experience requirements. Energy-sector connection: Real-time control software for fusion power systems.

Retrieval note: New posting found in expansion round. Official Lever application page includes applicant input fields. Major fit is an archive classification; eligibility follows the employer qualifications.

Identity review: New posting: official employer title, location and identifier captured.. Source type: Official employer Lever. Source identifier: ca1ae177-9781-4ea1-8fd3-f22c43e9e094.
