Job description

Additional Location(s): N/A

Diversity - Innovation - Caring - Global Collaboration - Winning Spirit - High Performance

At Boston Scientific, we'll give you the opportunity to harness all that's within you by working in teams of diverse and high-performing employees, tackling some of the most important health industry challenges. With access to the latest tools, information and training, we'll help you in advancing your skills and career. Here, you'll be supported in progressing - whatever your ambitions.

At Boston Scientific, we value collaboration and synergy. This role follows an onsite work model, requiring employees to be in our local office at least five days per week.

Relocation and housing assistance may be available to those who meet the eligibility criteria.

Boston Scientific will not offer sponsorship or take over sponsorship of an employment VISA for this position at this time

We will consider qualified applicants of all ages who are starting (or restarting) their careers

Our R&D engineers are tasked with designing and developing implant products for the Active Implantable Systems (AIS) group. This includes technologies that monitor, support diagnosis and treat irregular heart rhythms, heart failure, and sudden cardiac arrest. AIS provides devices and therapies for a patient's entire continuum of care, from diagnostic to treatment. This division strives to innovate and create a paradigm shift that can solve unmet clinical needs and change what is possible for patients.

Your responsibilities will include:

Develop deep learning models to predict cardiac events using ECG and other physiological signals

Apply signal processing techniques to clean, analyze, and interpret biosignals for device diagnostics and monitoring

Support the design of AI/ML algorithms that enhance implantable device performance and patient outcomes

Collaborate with engineers to integrate Python-based tools for data analysis, simulation, and model validation

Contribute to feasibility studies exploring novel diagnostic features for heart rhythm and heart failure detection

Analyze large datasets from implantable devices to identify patterns and inform next-generation therapy development

Work closely with clinical, software, and hardware teams to ensure alignment between algorithm development and device capabilities

Required Qualifications:

Masters or Ph.D. student. Must have at least one semester of school left post-internship to qualify. Graduation date between December 2027 - May 2029

Working towards a degree in Biomedical Engineering (EE emphasis), Electrical Engineering, Data Science, Neuroscience, or Mathematics.

Must be able to start internship on May 17th or 24th, 2027 and work for 12 weeks

Must have reliable transportation to/from work.

Preferred Qualifications:

Experience with AI/ML and deep learning-based prediction model development

Experience with testing-related projects in school or work

Experience working with/studying Electrocardiogram (ECG) and physiological signals using signal processing

Medical device industry experience

Excellent communication and collaboration skills

Requisition ID: 635392

Minimum Salary: $ [[cust_salaryMin]]

Maximum Salary: $ [[cust_salaryMax]]

The anticipated compensation listed above and the value of core and optional employee benefits offered by Boston Scientific (BSC) - see www.bscbenefitsconnect.com- will vary based on actual location of the position and other pertinent factors considered in determining actual compensation for the role. Compensation will be commensurate with demonstrable level of experience and training, pertinent education including licensure and certifications, among other relevant business or organizational needs. At BSC, it is not typical for an individual to be hired near the bottom or top of the anticipated salary range listed above.

Compensation for non-exempt (hourly), non-sales roles may also include variable compensation from time to time (e.g., any overtime and shift differential) and annual bonus target (subject to plan eligibility and other requirements).

Compensation for exempt, non-sales roles may also include variable compensation, i.e., annual bonus target and long-term incentives (subject to plan eligibility and other requirements).

For MA positions : It is unlawful to require or administer a lie detector test for employment. Violators are subject to criminal penalties and civil liability.

Boston Scientific transforms lives through innovative medical technologies that improve the health of patients around the world. As a global medical technology leader for more than 45 years, we advance science for life by providing a broad range of high-performance solutions that address unmet patient needs and reduce the cost of healthcare. Our portfolio of devices and therapies helps physicians diagnose and treat complex cardiovascular, respiratory, digestive, oncological, neurological and urological diseases and conditions. Learn more at www.bostonscientific.com and follow us on LinkedIn .

Boston Scientific Corporation has been and will continue to be an equal opportunity employer. To ensure full implementation of its equal employment policy, the Company will continue to take steps to assure that recruitment, hiring, assignment, promotion, compensation, and all other personnel decisions are made and administered without regard to race, religion, color, national origin, citizenship, sex, sexual orientation, gender identity, gender expression, veteran status, age, mental or physical disability, genetic information or any other protected class.

Please be advised that certain US based positions, including without limitation field sales and service positions that call on hospitals and/or health care centers, require acceptable proof of COVID-19 vaccination status. Candidates will be notified during the interview and selection process if the role(s) for which they have applied require proof of vaccination as a condition of employment. Boston Scientific continues to evaluate its policies and protocols regarding the COVID-19 vaccine and will comply with all applicable state and federal law and healthcare credentialing requirements. As employees of the Company, you will be expected to meet the ongoing requirements for your roles, including any new requirements, should the Company’s policies or protocols change with regard to COVID-19 vaccination.

Among other requirements, Boston Scientific maintains specific prohibited substance test requirements for safety-sensitive positions. This role is deemed safety-sensitive and, as such, candidates will be subject to a prohibited substance test as a requirement. The goal of the prohibited substance testing is to increase workplace safety in compliance with the applicable law.

Notes for ECS 1100 students

How this connects to your major

Data Science: healthcare data analysis, data engineering, statistics, AI or computational biology; Computer Science: healthcare software, embedded systems, automation or secure computing. These are teaching annotations, not an employer guarantee of eligibility.

A path to explore after further study; graduate-level requirements are retained.

DS: Named discipline appears in source; consult qualifications for eligibility

CS: Teaching interpretation of role tasks; major eligibility is not explicitly confirmed

Skills mentioned in the posting

Python, Machine learning, Modeling/simulation, Verification/validation, Clinical knowledge, Communication/teamwork

Eligibility excerpts not shown above

Compensation (source excerpts): The captured employer page contains unresolved salary placeholders; no numeric pay range can be verified from those fields. Original placeholders are retained in the full source text.

Course sheet tags

Majors (teaching tags): DS; CS; Career stage (teaching tag): Graduate internship; Geography: Other US location; Recruiting status at capture: Posting readable at capture; no closure notice found; Employment type: Not stated in captured metadata.
