Job description

At Caris, we understand that cancer is an ugly word-a word no one wants to hear, but one that connects us all. That's why we're not just transforming cancer care-we're changing lives.

We introduced precision medicine to the world and built an industry around the idea that every patient deserves answers as unique as their DNA. Backed by cutting-edge molecular science and AI, we ask ourselves every day: "What would I do if this patient were my mom?" That question drives everything we do.

But our mission doesn't stop with cancer. We're pushing the frontiers of medicine and leading a revolution in healthcare-driven by innovation, compassion, and purpose.

Join us in our mission to improve the human condition across multiple diseases. If you're passionate about meaningful work and want to be part of something bigger than yourself, Caris is where your impact begins.

Position Summary

The Staff Bioinformatics Scientist leads a team of bioinformatics scientists responsible for the development, validation, implementation, and support of next-generation sequencing (NGS) bioinformatics pipelines and analytical workflows within a clinical or translational genomics environment. This role combines technical expertise, project leadership, and people management to ensure delivery of reliable, scalable, and compliant bioinformatics solutions supporting research, assay development, validation activities, and clinical operations. This role partners closely with laboratory, clinical, software engineering, IT, quality, and scientific stakeholders to advance genomic testing capabilities and operational excellence.

Job Responsibilities

Lead, coach, mentor, and develop a team of bioinformatics scientists, including hiring support, onboarding, performance management, career development, and workload prioritization.

Manage day-to-day bioinformatics operations and ensure timely delivery of high-quality analytical solutions across development, validation, and production activities.

Establish project plans, priorities, timelines, and resource allocations for team initiatives and cross-functional programs.

Oversee development, optimization, validation, and maintenance of NGS bioinformatics pipelines and workflows.

Support end-to-end genomic data analysis, including quality control, alignment, variant calling, annotation, filtering, interpretation support, and reporting workflows.

Lead analytical development and validation activities for NGS assays, including performance assessment, reproducibility studies, concordance analysis, quality metrics, and documentation.

Drive implementation of scalable, automated, and reproducible computational workflows using software development and bioinformatics best practices.

Collaborate with software engineering and IT teams to support cloud-based infrastructure, workflow execution, data storage, monitoring, and system performance.

Ensure bioinformatics processes comply with applicable quality, regulatory, documentation, privacy, and security requirements.

Partner with laboratory scientists, molecular pathologists, clinical teams, statisticians, and researchers to translate scientific and clinical requirements into analytical solutions.

Monitor project progress, identify risks and dependencies, communicate status updates, and facilitate resolution of technical and operational challenges.

Investigate and resolve complex pipeline, assay, and data quality issues while supporting production operations as needed.

Serve as a technical subject matter expert for bioinformatics workflows, genomic analyses, and assay validation efforts.

Stay current on emerging technologies, tools, methodologies, and industry best practices in genomics and bioinformatics.

Required Qualifications

PhD degree with experience in Bioinformatics, Computational Biology, Biostatistics, Computer Science, Genomics, Molecular Biology, or a related field.

Minimum of 5 to 8 years of hands-on bioinformatics experience supporting NGS pipeline development, validation, or production operations.

Minimum of 2 to 4 years of people leadership experience.

Demonstrated experience managing projects and coordinating cross-functional stakeholders.

Strong knowledge of NGS data analysis methods, quality metrics, bioinformatics workflows, and genomic data interpretation.

Strong programming and scripting skills using Python, Bash, SQL, R, or equivalent tools.

Experience with AWS or other cloud computing platforms supporting genomic data processing and storage.

Strong communication, collaboration, organizational, and problem-solving skills.

Proficiency in Microsoft Office Suite.

Preferred Qualifications

Experience supporting both research and clinical bioinformatics environments.

Experience with liquid biopsy, MRD, cancer early detection, ctDNA analysis, or related applications.

Experience with multi-omic data integration and advanced genomic analyses.

Experience working in CLIA, CAP, NYSDOH, FDA, ISO, or comparable regulated environments.

Experience preparing validation reports, technical documentation, regulatory support materials, or scientific publications.

Physical Demands

Must be able to sit, stand, and work at a computer for extended periods.

Training

All required training will be assigned based on job responsibilities.

Other

May require occasional travel, after-hours support, and participation in on-call activities.

Conditions of Employment: Individual must successfully complete pre-employment process, which includes criminal background check, drug screening, credit check (applicable for certain positions) and reference verification.

This job description reflects management’s assignment of essential functions. Nothing in this job description restricts management’s right to assign or reassign duties and responsibilities to this job at any time.

Caris Life Sciences is an equal opportunity employer. All qualified applicants will receive consideration for employment without regard to race, religion, color, national origin, gender, gender identity, sexual orientation, age, status as a protected veteran,

among other things, or status as a qualified individual with disability.

Notes for ECS 1100 students

How this connects to your major

Data Science: healthcare data analysis, data engineering, statistics, AI or computational biology. These are teaching annotations, not an employer guarantee of eligibility.

Use the degree and experience evidence to distinguish a first job from a later career step.

DS: Named discipline appears in source; consult qualifications for eligibility

Skills mentioned in the posting

Python, SQL, R, Statistics, Cloud, Verification/validation, Genomics/bioinformatics, Communication/teamwork

Eligibility excerpts not shown above

Compensation (source excerpts): Not stated in captured posting text.

Course sheet tags

Majors (teaching tags): DS; Career stage (teaching tag): Senior / leadership; Geography: Other US location; Recruiting status at capture: Posting readable at capture; no closure notice found; Employment type: Full time.
