Job description

Abbott is a global healthcare leader that helps people live more fully at all stages of life. Our portfolio of life-changing technologies spans the spectrum of healthcare, with leading businesses and products in diagnostics, medical devices, nutritionals and branded generic medicines. Our 122,000 colleagues serve people in more than 160 countries.

JOB DESCRIPTION:

Working at Abbott

At Abbott, you can do work that matters, grow, and learn, care for yourself and your family, be your true self, and live a full life. You'll also have access to:

Career development with an international company where you can grow the career you dream of.

Employees can qualify for free medical coverage in our Health Investment Plan (HIP) PPO medical plan in the next calendar year.

An excellent retirement savings plan with a high employer contribution

Tuition reimbursement, the Freedom 2 Save student debt program, and FreeU education benefit - an affordable and convenient path to getting a bachelor's degree.

A company recognized as a great place to work in dozens of countries worldwide and named one of the most admired companies in the world by Fortune.

A company that is recognized as one of the best big companies to work for as well as the best place to work for diversity, working mothers, female executives, and scientists.

The Opportunity

This position works out of our Plymouth, MN location in the SH division.

Structural Heart Business Mission: Why We Exist.

Our business purpose is to restore health and improve quality of life by designing and providing device and management solutions for treating structural heart disease.

The Engineer will contribute to the design, development, verification, and maintenance of software systems supporting innovative medical device products. This role provides an opportunity to work across the software development lifecycle, including software implementation, verification and validation, automated testing, system integration, and regulatory compliance activities within a quality-driven environment.

The successful candidate will collaborate with cross-functional teams including Systems Engineering, Quality, Regulatory Affairs, Cybersecurity, and Product Development to deliver safe and effective solutions that improve patient outcomes.

What You'll Work On

Design, develop, test, and maintain software applications and system components.

Participate in software verification and validation activities, including unit, integration, and system-level testing.

Develop, execute, and document software test procedures and test results.

Contribute to software quality initiatives including code reviews, defect resolution, and process improvements.

Support development and maintenance of automated test solutions and continuous integration pipelines. Participate in software requirements, design, risk management, and architecture reviews.

Assist in debugging software and system-level issues using appropriate development and diagnostic tools.

Collaborate with cross-functional teams to ensure software solutions meet functional, quality, and regulatory requirements.

Support software documentation activities throughout the product lifecycle.

Follow Abbott quality system procedures and software development processes.

Required Qualifications

Bachelor's degree in Computer Science, Software Engineering, Computer Engineering, Electrical Engineering, or a related technical discipline.

0-2 years of related work experience.

Strong programming skills in object-oriented software development.

Understanding of software development lifecycle methodologies and software testing practices.

Experience with source control and version management tools.

Strong analytical, troubleshooting, and problem-solving skills.

Effective written and verbal communication skills.

Ability to work independently and within cross-functional teams.

Preferred Qualifications

Experience developing software in C++ & C#.

Experience with GUI development frameworks such as Qt.

Familiarity with embedded Linux environments.

Knowledge of software verification and validation practices.

Experience with automated testing frameworks.

Familiarity with CI/CD tools and build automation.

Experience with Git and CMake.

Exposure to regulated industries such as medical devices, aerospace, or automotive.

Experience with scripting languages such as Python.

Understanding of cybersecurity principles and secure software development practices.

Key Competencies

Software Development

Software Verification & Validation

Problem Solving

Technical Documentation

Cross-Functional Collaboration

Continuous Improvement

Quality and Compliance Focus

Effective Communication
