Senior AI/ML Software Engineer

Medtronic · Galway, County Galway, Ireland

Job ID (this archive)	HI-136
Employer	Medtronic
Location(s)	Galway, County Galway, Ireland
Career stage (archive tag)	Experienced
Location group	Outside the U.S.
Majors (archive tags)	Computer Science, Software Engineering, Data Science
Pay listed	€65,600 – €98,400 per year
Employment type	Full time
Posted / listing date	2026-10-08
Employer requisition	R71976
Recruiting status when checked	Open when checked (Oct 11, 2026). Employer note: Open — employer posting available Saved PDF = full employer posting text, reformatted for print.

Job description

Careers that change lives start here. Medtronic is a global leader in healthcare technology with a Mission to alleviate pain, restore health, and extend life. Our 95,000 employees work across more than 150 countries to put patients first - developing innovative medical technologies that improve the lives of 72+ million patients each year. Your unique talents will help shape the future of healthcare while building a career grounded in purpose, growth, and impact.

A Day in the Life

At Medtronic, we value what makes you unique. Be part of a company that thinks differently to solve problems, make progress, and deliver meaningful innovations.

Our Purpose

The Interventional Cardiology Therapies (ICT) Operating Unit is dedicated to transforming care for patients with coronary disease and hypertension. We combine innovative devices, digital technologies, and advanced analytics and artificial intelligence to support clinicians and improve patient outcomes worldwide. The work you do will impact patients globally and help support Medtronic’s mission of alleviating pain, restoring health, and extending life.

Come for a job, stay for a career!

A Day in The Life Of:

As a Senior AI Software Engineer, you will combine strong data science expertise with solid software engineering skills to design, build, and deploy production-grade machine learning systems. This role focuses on developing robust ML models and integrating them into scalable software systems that support real-world applications. The ideal candidate has a strong theoretical foundation in machine learning and data science, along with hands-on experience building ML pipelines, deploying models to production environments, and maintaining reliable ML services. This role works closely with data engineers, software engineers, and product teams to operationalize AI solutions.

Primary Responsibilities:

Computer Vision & Machine Learning Development

Design, develop, and evaluate computer vision and machine learning models to solve complex business and technical problems.

Perform data exploration, feature engineering, and model experimentation.

Apply appropriate validation and evaluation methodologies to ensure robust model performance.

Continuously improve models through experimentation and iterative development.

ML Systems and Production Deployment

Build end-to-end machine learning pipelines for data ingestion, training, validation, and deployment.

Deploy models into production environments as APIs, services, or batch processing pipelines.

Implement monitoring and performance tracking for deployed models.

Ensure reproducibility, versioning, and lifecycle management of ML models.

Software Engineering

Develop high-quality, maintainable, and testable Python code for ML systems.

Apply software engineering best practices including modular design, automated testing, and code review.

Design scalable services and components that integrate ML models into production applications.

Collaborate with engineering teams to integrate ML capabilities into broader systems.

Infrastructure and MLOps

Work with cloud-based infrastructure to support ML training and deployment workflows.

Implement CI/CD processes for ML pipelines and model releases.

Support automation of model retraining and operational monitoring.

Ensure reliability, scalability, and observability of ML services.

Collaboration and Communication

Work in agile/scrum framework and cross-functionally with data engineers, software engineers, and domain experts.

Translate analytical results into practical solutions and production-ready systems.

Contribute to architectural discussions for AI-enabled platforms and products.

Required Qualifications

Master’s Degree in Computer Science, Data Science, Artificial Intelligence, Machine Learning, or a related field.

Strong theoretical foundation in machine learning, statistics, and data science methods.

Demonstrated experience developing machine learning models.

Experience building and maintaining ML pipelines.

At least 3 years of experience deploying machine learning models into production environments.

Strong proficiency in Python.

Experience with cloud platforms and modern MLOps workflows.

Solid understanding of software engineering fundamentals including version control, testing, and modular system design.

Preferred Qualifications

3+ years of experience in Computer Vision.

3+ years of experience working with large datasets and data engineering workflows.

Experience developing scalable data processing pipelines.

Experience with containerization and orchestration technologies (e.g., Docker, Kubernetes).

Experience with distributed data processing or large-scale ML systems.

Experience implementing monitoring and observability for ML systems.

Medtronic offer a competitive salary and flexible Benefits Package. We support a hybrid work model. Alongside a competitive base salary, we provide a comprehensive benefits package including an annual performance bonus, pension contribution, family healthcare coverage, continuous professional development, and more.

#LI-hybrid

Physical Job Requirements

The above statements are intended to describe the general nature and level of work being performed by employees assigned to this position, but they are not an exhaustive list of all the required responsibilities and skills of this position.

Recruitment Fraud Alert

We are aware of phishing scams targeting job seekers. Please keep the following in mind:

Apply only through official Medtronic channels. All legitimate Medtronic recruiting communications come from approved Medtronic platforms and official @medtronic.com email addresses.

Medtronic will never ask for payment or sensitive personal information (such as bank account or Social Security details) during early stages of the hiring process. Any such requests are not legitimate.

If you receive a suspicious message claiming to be from Medtronic, do not respond, click links, or open attachments.

If you have any questions, concerns regarding the authenticity of a communication alleged to have been made by or on behalf of Medtronic, please contact us immediately at AskHR@medtronic.com.

Benefits & Compensation

Medtronic offers a competitive Salary and flexible Benefits Package

A commitment to our employees lives at the core of our values. We recognize their contributions. They share in the success they help to create. We offer a wide range of benefits, resources, and competitive compensation plans designed to support you at every career and life stage.

Pay range / Rango salarial / Intervalo salarial /Fascia retributiva / Tranche de salaire / Gehaltsband / Salaribereik: Ireland: 65,600.00 EUR - 98,400.00 EUR |

The final salary within this range will be determined based on objective, job-related criteria, including relevant experience, skills and qualifications, in accordance with our compensation framework.

nThis position is eligible for a short-term incentive called the Medtronic Incentive Plan (MIP).

Notes for ECS 1100 students

Course spreadsheet notes

Skills mentioned: Python; computer vision; ML pipelines; MLOps; CI/CD.

Software Engineering

Software/ML role; Software Engineering not explicitly named.

Degree: Master’s degree required

Experience / eligibility: 3+ years each in production ML deployment, computer vision and large datasets/data workflows.

Other: Local work authorization / sponsorship not specified; check employer. Posted closing date: 2026-11-30.

Other majors named: CS, Data Science, AI, Machine Learning or related

Career stage: Experienced / senior / Full-time / experienced
